

WARNING TO ALL CARPET CLEANERS!

HEAT KILLS THE LIFE OF YOUR ENGINE!

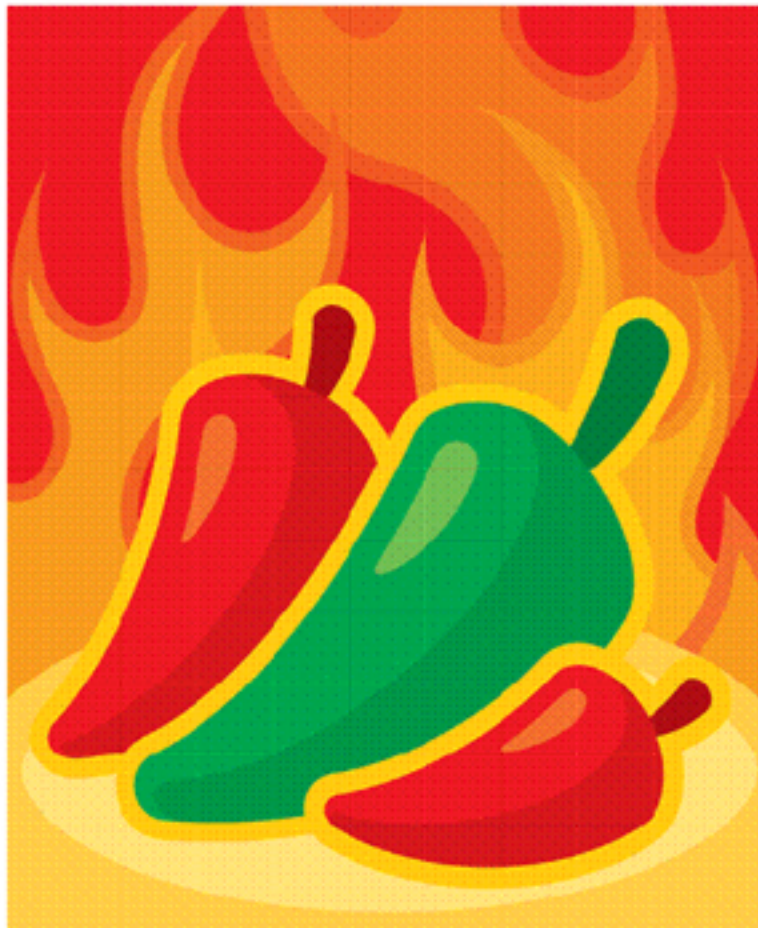

Most truck mounts are all boxed in which creates tremendous heat in the box. The heat destroys engines, blowers, pumps, electrical systems and much more. Just look at any power unit used in generators, irrigation pumps, or other power units. These heat producing motors are never boxed in so they can remove the heat properly. Steamaction has used this engineering for over 40 years and our truck mounts last YEARS longer.

We have used Ford, GM, Caterpillar, Honda, and Kohler power units in our truck mounts and they are never, ever boxed in.

STEAMACTION ALWAYS THINKS OUTSIDE THE BOX!
